Data Dictionary

22 December 2011

Notes:

The format for this data dictionary is as follows:

<i>Variable Name</i>
Description ¹
Variable Type ²
Response values ³

The following are codes are used for ALL variables:

- 1: Na, asked
- 2: Not applicable (routing)

¹ A short verbal description of the variable, which may include the original question text.

² Variable types include: String (text), categorical, numeric – discrete, and numeric – continuous.

³ This field is either descriptive (for string variables), a list of the response categories (for categorical variables), or a description of the range of the data.
